A exhibition of new prints from over *50 years of Space Photography* is joining the current *Life Form Exhibition* for a mind-blowing journey from the living world close-up to the depths of space. The Space Exhibit evolved out of Steve's longterm interest in the space program and views offered of the heavens and by spacecraft far away. The concentration on the exotic form of the living world of the *Life Form* work inspired this expressive look at the wonders of the very large and distant in this print exploration of photographs Steve had been gathering for years.
